Cloud
AWS (EC2, S3), DigitalOcean, Firebase (Authentication, Firestore)

EXPERIENCE

Self Employed, *Software Engineer*

Jun 2023 – Sep 2024

Delivered custom web solutions for multiple clients, specializing in social platforms, e-learning systems, and secure file management tools.

- Launched a social media platform, achieving **2,000 daily active users**.

- Developed a Learning Management System (LMS) supporting **500 students**, along with a Content Management System (CMS) and a complete Redesign for the accompanying website.

- Built an MVP for a secure file management system to meet clients' data protection needs.

PROJECTS

Rentap – Product Rental Platform
Developed a mobile app for renting spare products, allowing users to earn income from unused items.

- Developed listing, search, and booking features, enabling users to browse available rentals and easily connect with product owners.

- Integrated secure payment option (Stripe) to facilitate smooth transactions between renters and owners.

BrandsBuddies - Brand-Influencer Platform
Developed during buildspace's 6-week program (Top 7.4% of 70,000 participants)

- Built MVP for a platform connecting brands with influencers, featuring user login, email verification, and Twitter API integration.

- Designed responsive landing page and optimized UX for cross-device compatibility.

ACHIEVEMENTS

- Winner of Web Development Competition (DevDay 2022), which involved designing and building a mobile-responsive website within a limited time frame.

- Proposed an idea at HackFest22, a hackathon competition, which ranked 10th out of 38 teams in the qualifier round.
